

The Global Citizen's Language Toolkit

Mastering Grammar for Real-World Impact

Three Domains of Communication

Phase 1: The Macro World

Focus: Environmental Advocacy & Conservation

Grammar Tools:

- Phrasal Verbs
- Unless
- Passive Voice
- Since / Therefore

Phase 2: The Social World

Focus: Public Spaces & Personal Health

Grammar Tools:

- Reported Speech
- Determiners
- Ought to
- Infinitives

Phase 3: The Personal World

Focus: Accidents, Preferences & Relationships

Grammar Tools:

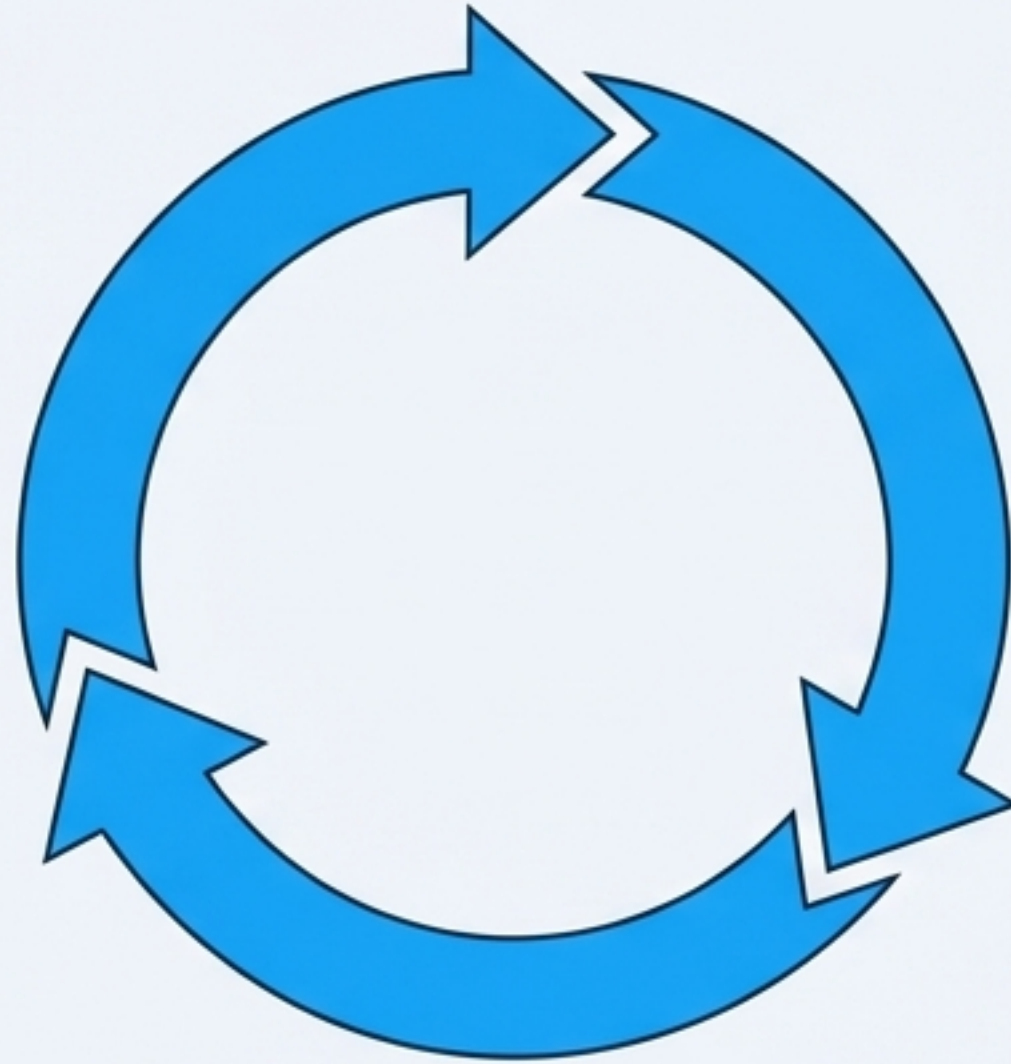

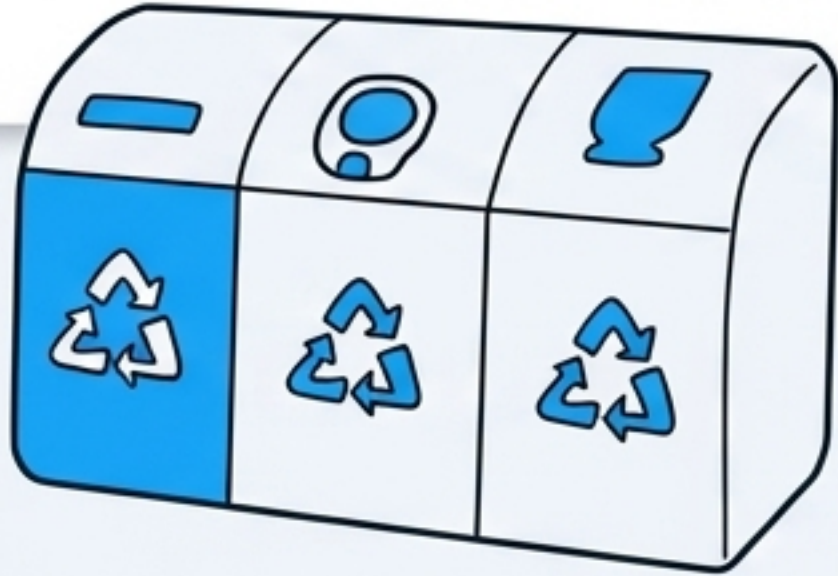

- Reflexive Pronouns
- Pair Connectives

Actionable Environmentalism: The Phrasal Verb Lifecycle

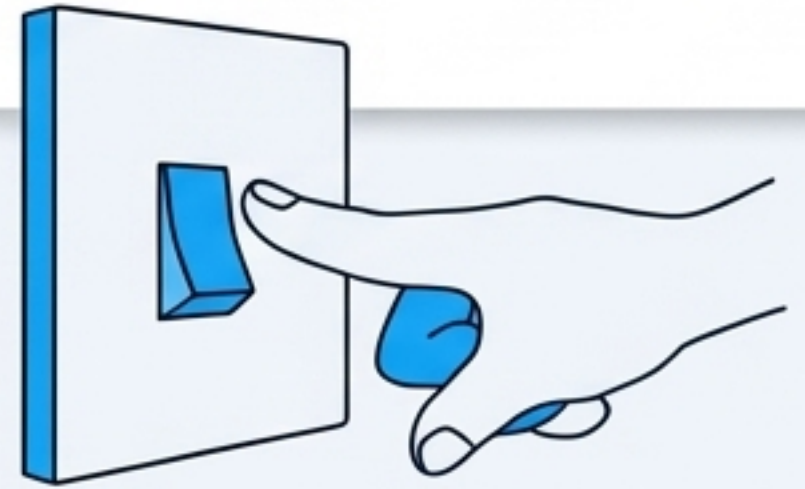

Stage 3: Redirection

- cut down (on energy)
- throw away (waste)
- give away (to charity)

Stage 1: Consumption

- turn on (power)
- use up (resources)

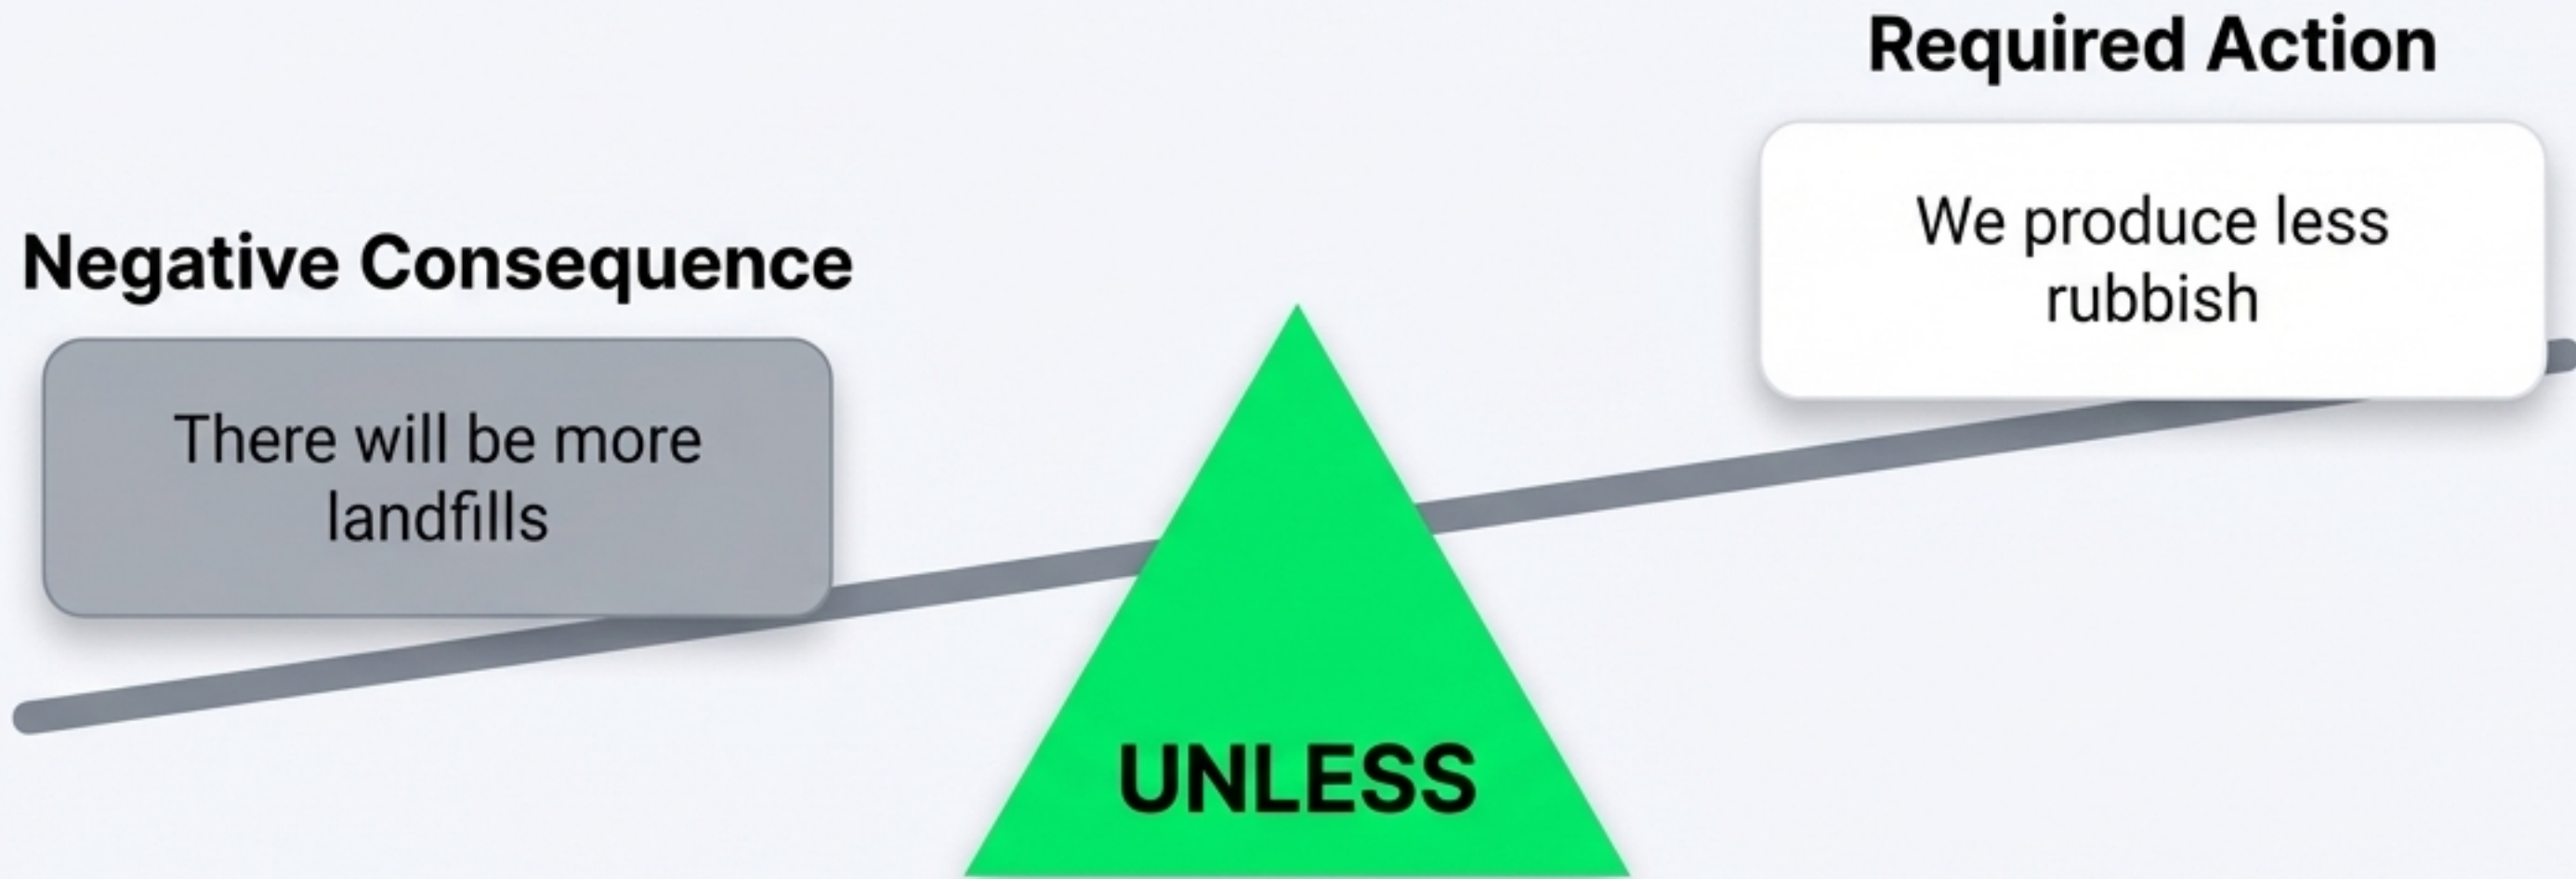

Stage 2: Intervention

- care for (the environment)
- clean up (beaches)

Key Insight: Phrasal verbs combine a verb + adverb/preposition to create highly specific – action tools required for a green lifestyle.

The Pivot of Action: Understanding “Unless”

Unless = If not

Unless we produce less rubbish, there will be more landfills.

= If we do not produce less rubbish, there will be more landfills.

Shifting the Focus: Active vs. Passive Voice

The Active Voice (Actor-Focused)

Context: Use when the person doing the action is known and important.

Example: People hunt rhinos for their horns.

The Passive Voice (Target-Focused)

Context: Use when we do not know or need to know who does the action. The focus is on the victim.

Subject + is/am/are + Past Participle

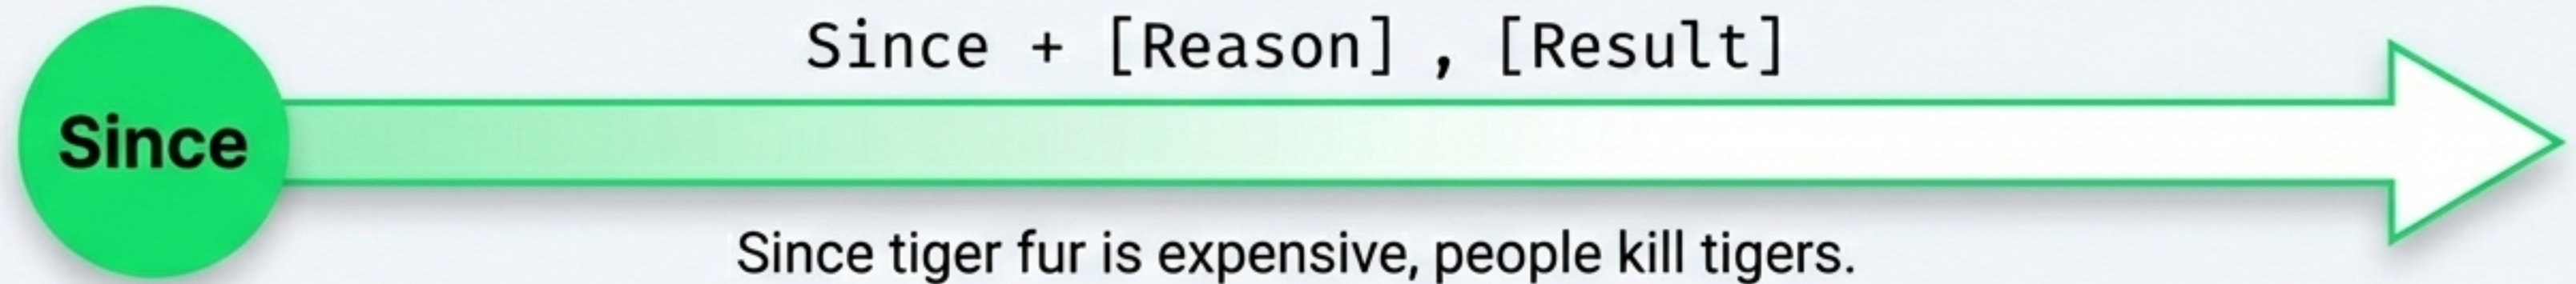

Example: Rhinos are hunted for their horns.

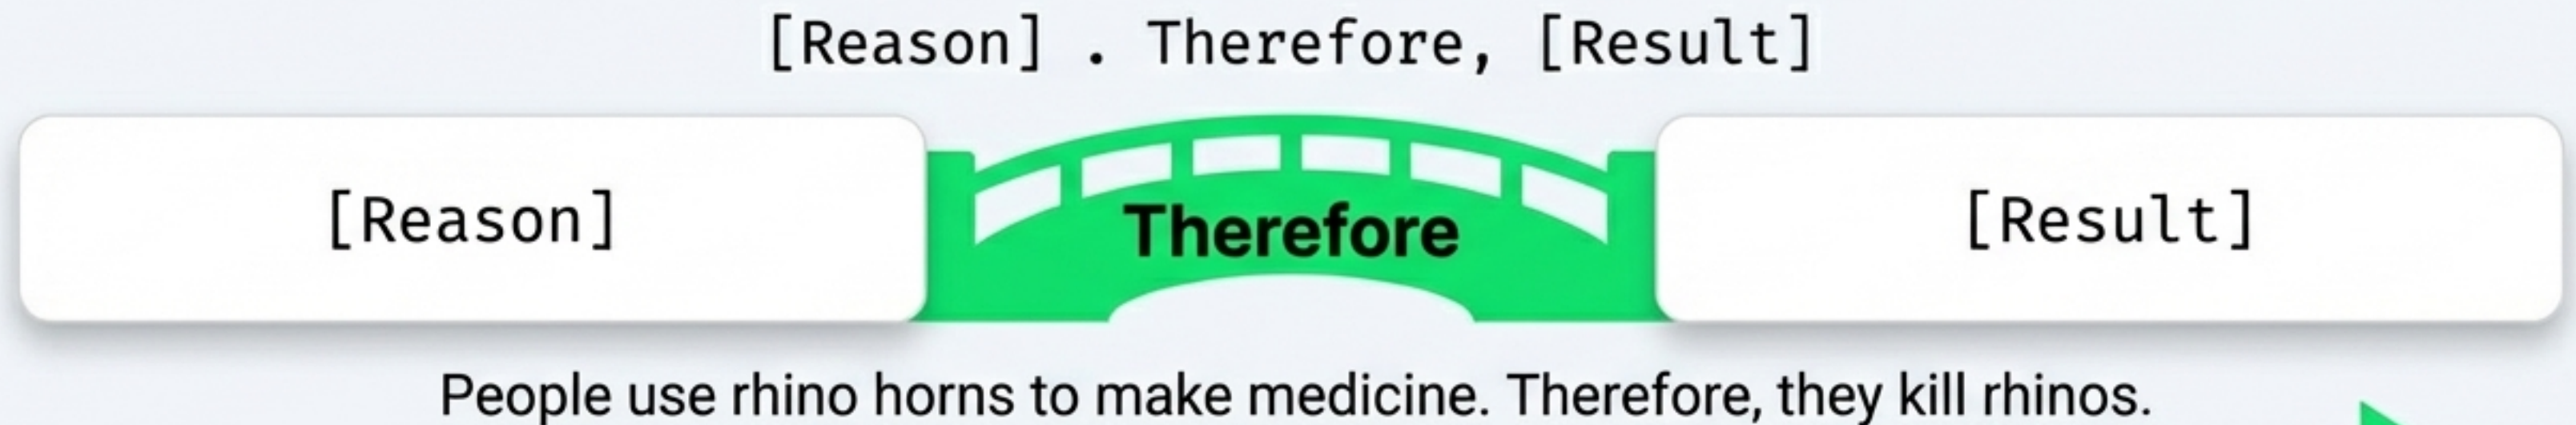

The passive voice is an essential tool for conservationists to highlight the survival of endangered animals rather than the humans harming them.

The Cause & Effect Bridge

Flow 1: The 'Since' Push

Flow 2: The 'Therefore' Bridge

Notice the punctuation! '**Since**' links ideas in one breath. '**Therefore**' requires a full stop and bridges two complete thoughts.

Information Relay: The Doctor's Visit Timeline

Time 1: The Clinic (Past)

"Take the medicine on time."

"Don't go to school."

Time 2: At Home (Present)

"The doctor **told me to take** the medicine on time."

"He **told me not to go** to school."

Affirmative: told + object + to + base verb
Negative: told + object + not to + base verb

Identifying Scope: The Determiner Diagnostic

'Another' (Singular Addition)

[+1]

Rule: Use for ONE additional person or thing of the same type.

Example: She climbed one tree and we climbed another tree.

'Other' (Plural Distinct)

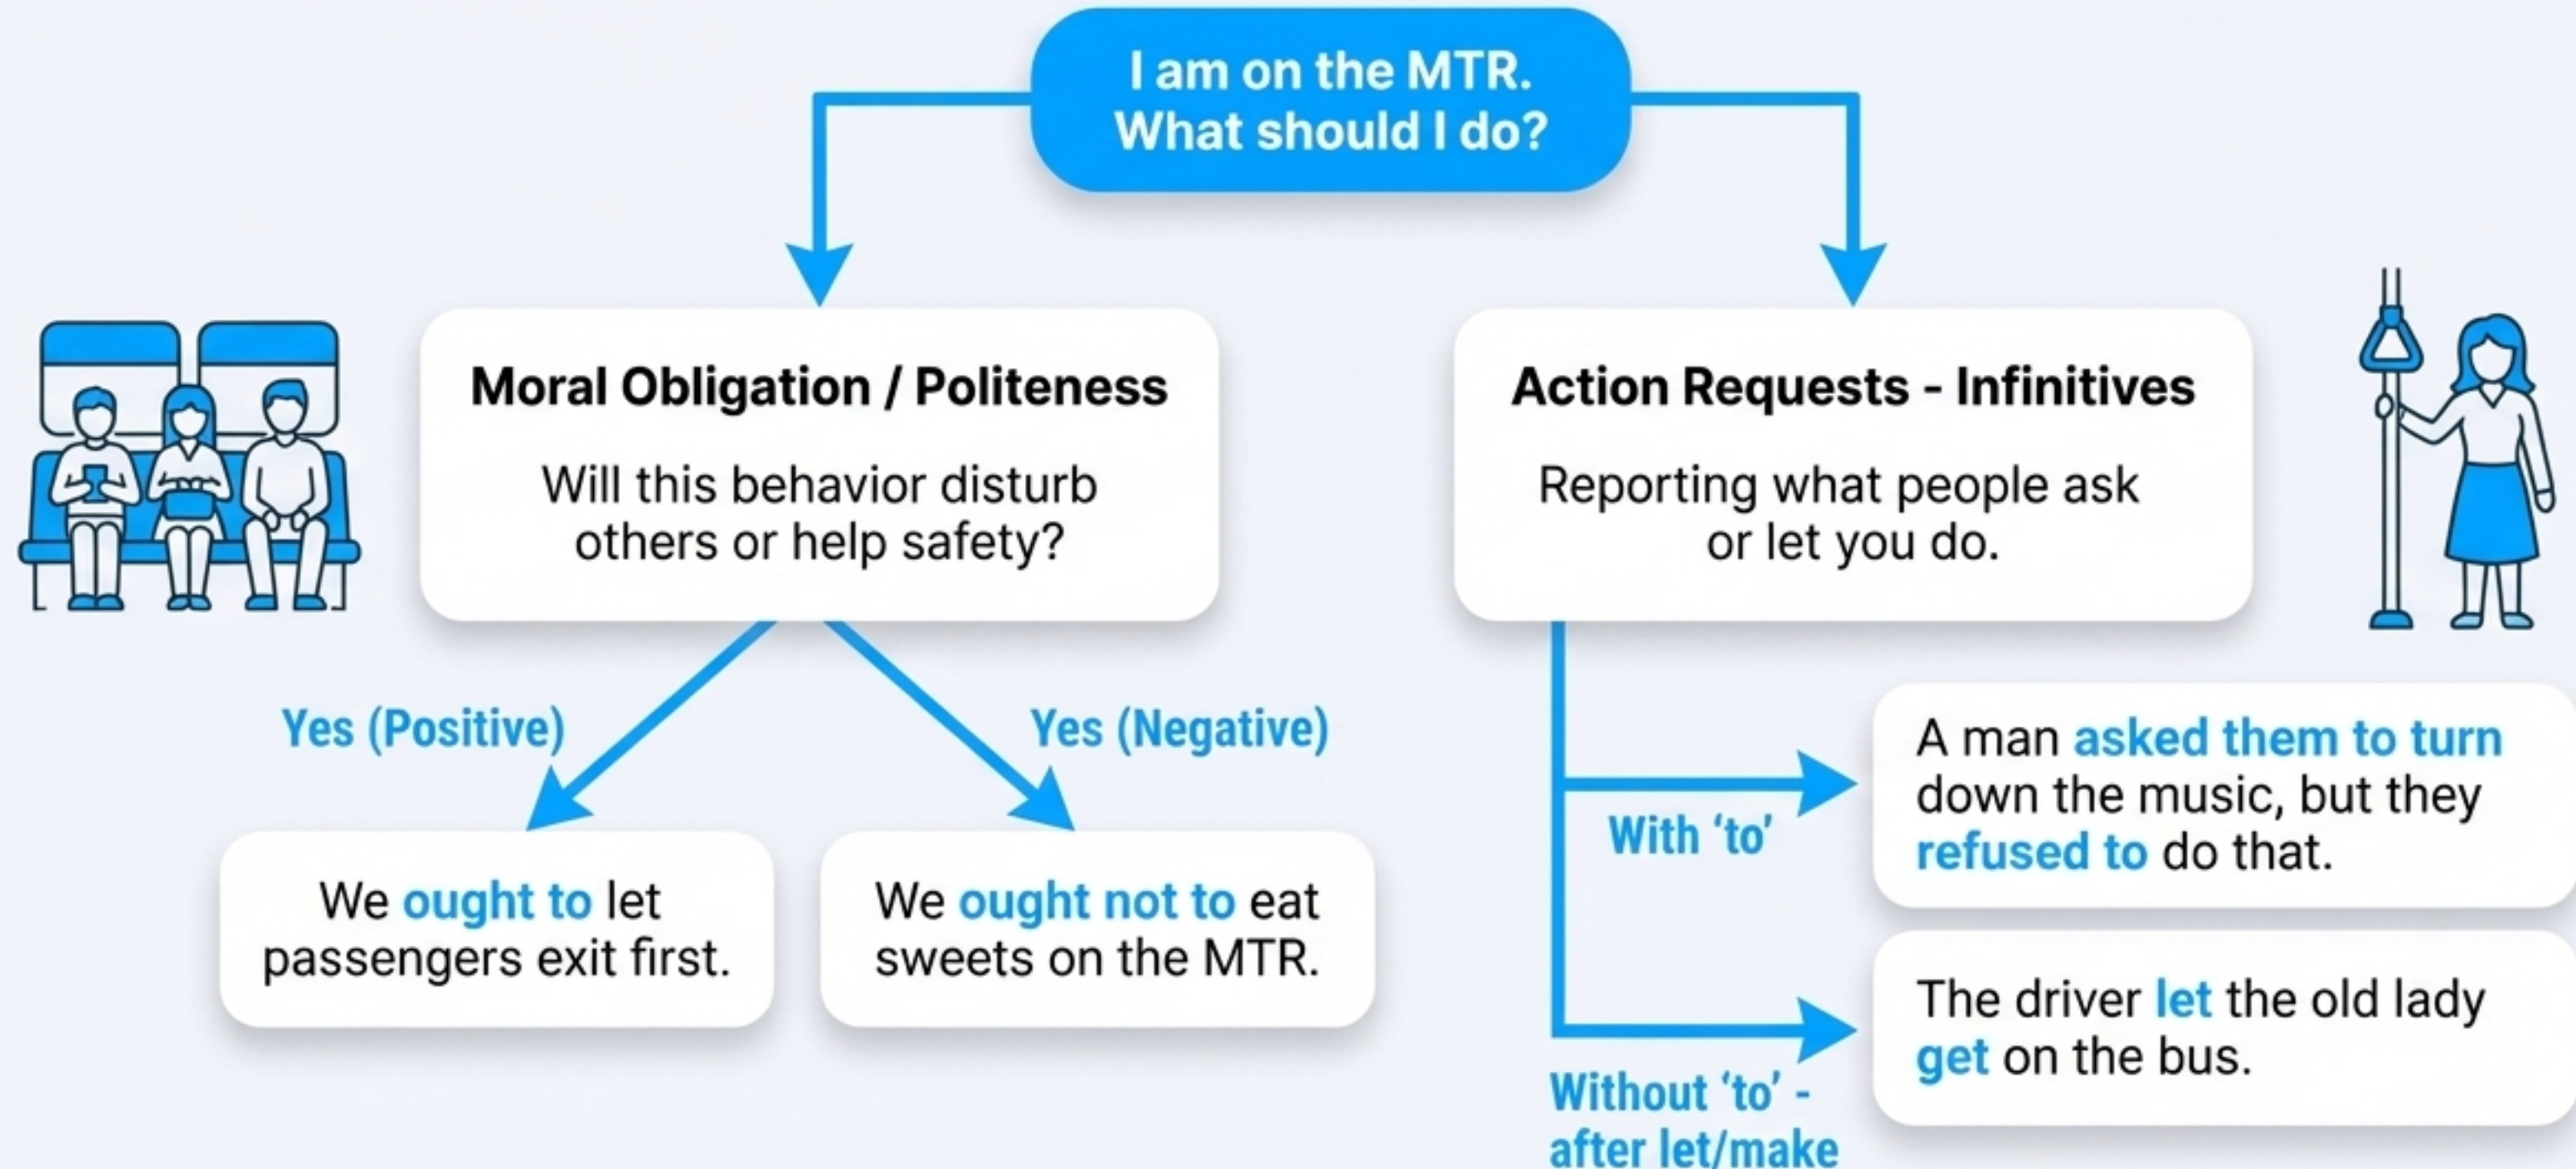

[+Many]

Rule: Use for SEVERAL different people or things.

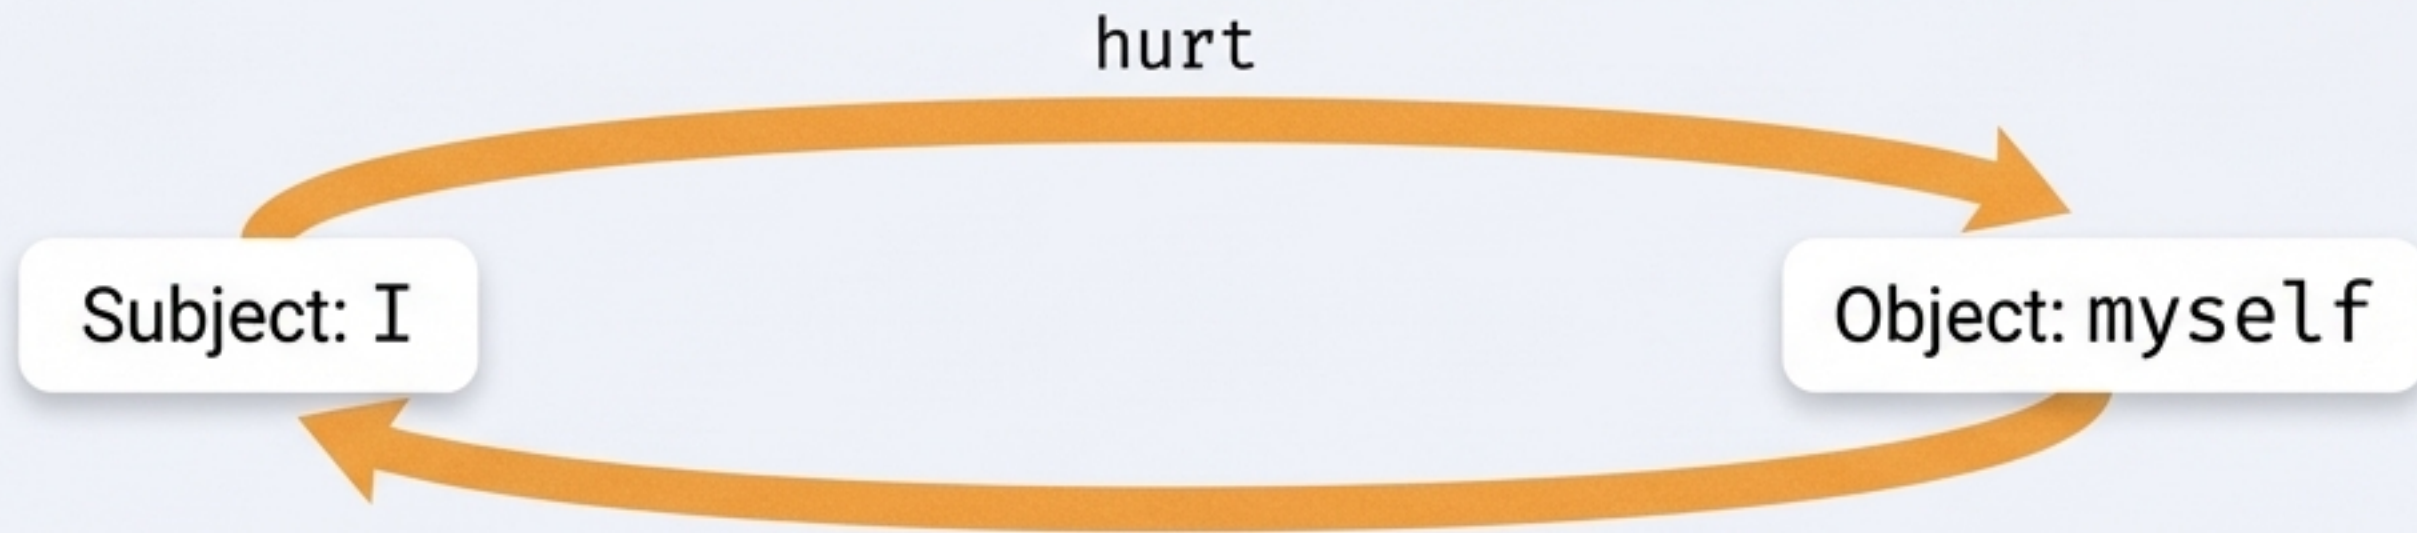

Example: A dog barked at some other dogs.

The Consideration Decision Tree: Navigating Public Transport

The Subject-Object Loop: Reflexive Pronouns

Use a reflexive pronoun when the subject performing the action is the SAME as the object receiving the action.

I was skateboarding and I hurt **myself**.

My sister was playing basketball and she hurt **herself**.

The dog was playing in the park and it hurt **itself**.

The Choice Matrix: Pairing Connectives

	Stating Facts	Stating Preferences
Options Available	either... or Use: Positive choices. We can either go sailing or go windsurfing. 	would rather... than Use: Expressing a clear favorite. I would rather go rock climbing than do archery. 
Options Unavailable	neither... nor Use: Negative constraints. I can neither swim in the river nor climb trees.	

Synthesis: The Master Communicator's Toolkit

	Explaining Cause & Effect	Describing Actions & States
Discussing the External World (Macro/Social)	Since / Therefore Unless (Advocating for the environment)	Passive Voice Phrasal Verbs (Describing systems and policies)
Discussing the Internal World (Personal/Preferences)	Ought to Infinitives (Navigating social friction and rules)	Reflexive Pronouns would rather... than (Expressing personal health and choice)

Grammar is not just fill-in-the-blanks; it is the operating system for mature, effective communication in a complex world.
